ABOUT ME

CSE-DS engineering student with a strong interest in Data Science, Artificial Intelligence, and software development. Skilled in C and Python, with working knowledge of SQL, Git, and GitHub. Developed academic projects such as a Smart Parking System and actively building programming and problem-solving skills through hands-on practice. Gaining experience in Data Structures, Machine Learning, and practical application development. Passionate about learning new technologies and building projects that solve real-world problems.

SOFT SKILLS

- Strong problem solving
- Analytical Thinking
- Effective Communication
- Teamwork & Collaboration
- Leadership & Coordination
- Adaptability & Quick Learning

TECHNICAL SKILLS

- C- programming
- Python
- Java
- SQL
- Github

EDUCATION

Bachelor of Engineering (CSE - DATA SCIENCE)

Ballari Institute of Technology and management (2029)

ACHIEVEMENTS

Certified "Hackerrank participate" at BITM , 2025.

AREA OF INTEREST

- Data Science and Data Analytics
- Artificial Intelligence & Machine Learning
- Software Development & Programming
- Data Structures & Problem solving
- Python & C-programming
- DataBase Management and SQL
- Internet of Things & Embedded Systems

PROJECTS

EMPLOYEE SALARY CALCULATION

(2025)

C-programming Console project

- Developed an Employee Salary Calculation system in C using structures and arrays to efficiently manage employee records.
- Implemented salary-related calculations and organized employee data using structured programming concepts.
- Applied arrays, structures, input handling, and computational logic to build a practical employee management application.

BANK MANAGEMENT SYSTEM

(2025)

Python Console project

- Developed a Bank Management System in Python using conditional statements and Object-Oriented Programming concepts to manage basic banking operations.
- Implemented classes, objects, and methods to organize customer and account-related data efficiently.
- Applied conditional logic to handle transactions and account operations, demonstrating practical use of Python programming concepts.

EXPENSE MANAGEMENT SYSTEM

(2025)

Innovation & Design Thinking

- Developed an Expense Manager web application to record, organize, and monitor personal expenses efficiently.
- Implemented features for adding and managing expense records, helping users keep track of their spending.
- Designed a simple and user-friendly interface focused on easy expense tracking and better financial organization.

SMART PARKING SYSTEM

(2026)

Interdisciplinary Project

- Developed a Smart Parking System prototype using Arduino and IR sensors to detect vehicle entry and available parking slots.
- Integrated a servo motor and LCD display to automate parking gate control and provide real-time parking status.
- Designed the system to improve parking management by reducing manual monitoring and efficiently utilizing available parking spaces.
